

# Solution of 1D heat conduction with constant source using FEM

Ramkumar

January 7, 2024

# Problem definition and analytical solution

- ▶ 1D HC with  $T = 0$  at boundaries and heat source,  $Q = 2.0$
- ▶ Analytical solution obtained using the method of manufactured solutions

$$T(x) = x - x^2$$

- ▶ Governing equation

$$K \frac{d^2 T}{dx^2} + Q = 0$$

# Finite element fomulation

- ▶ Galerkin method with linear shape function elements were used

$$\int_0^L \phi(x) \left( K \frac{d^2 T}{dx^2} + Q \right) dx = 0$$

- ▶ Shape functions

$$N_1 = 1 - \frac{x}{h}$$

$$N_2 = \frac{x}{h}$$

h - spatial step size

- ▶ Matrix equation

$$\frac{K}{h} \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix} \begin{bmatrix} T_1 \\ T_2 \end{bmatrix} = \frac{Qh}{2} \begin{bmatrix} 1 \\ 1 \end{bmatrix} + \begin{bmatrix} q_1 \\ q_2 \end{bmatrix}$$
